

Technical data

Motor contactor CES

CES contactors

Contact endurance of the main contacts

The characteristic curves show the contact endurance of contactors when switching resistive and inductive three-phases loads (AC-1/AC-3) depending on the breaking current and the rated operational voltage. It is assumed that the control devices operate randomly, i.e. not in synchronism with the phase angle of the supply system.

The rated operational current I_e for AC-4 duty (breaking 6 times the rated operational current) is selected for a contact endurance of approximately 200,000 operating cycles.

If a shorter endurance is sufficient, the rated operational current I_e / AC-4 can be increased.

If mixed operation is involved, i.e. normal switching (breaking of rated operational current in AC-3 duty) with intermittent inching (breaking multiples of the rated operational current in AC-4 duty) the contact endurance can be calculated approximately from the following equation:

$$X = \frac{A}{1 + \frac{C}{100} \left(\frac{A}{B} - 1 \right)}$$

Legend to the equation:

X Contact endurance for mixed operation in operating cycles

A Contact endurance for normal operation ($I_a = I_e$) in operating cycles

B Contact endurance for inching ($I_a = \text{multiple of } I_e$) in operating cycles

C Percentage of inching operations in total operations

Short-circuit protection of CES 6 to CES 105 contactors without overload relay

Fuses, utilization category gG

or miniature circuit-breaker with C-characteristics

¹⁾ In accordance with IEC 60947-4-1:

Type of coordination "1": Destruction of contactor and overload relay is admissible. Contactor and/or overload relay must be replaced if necessary.

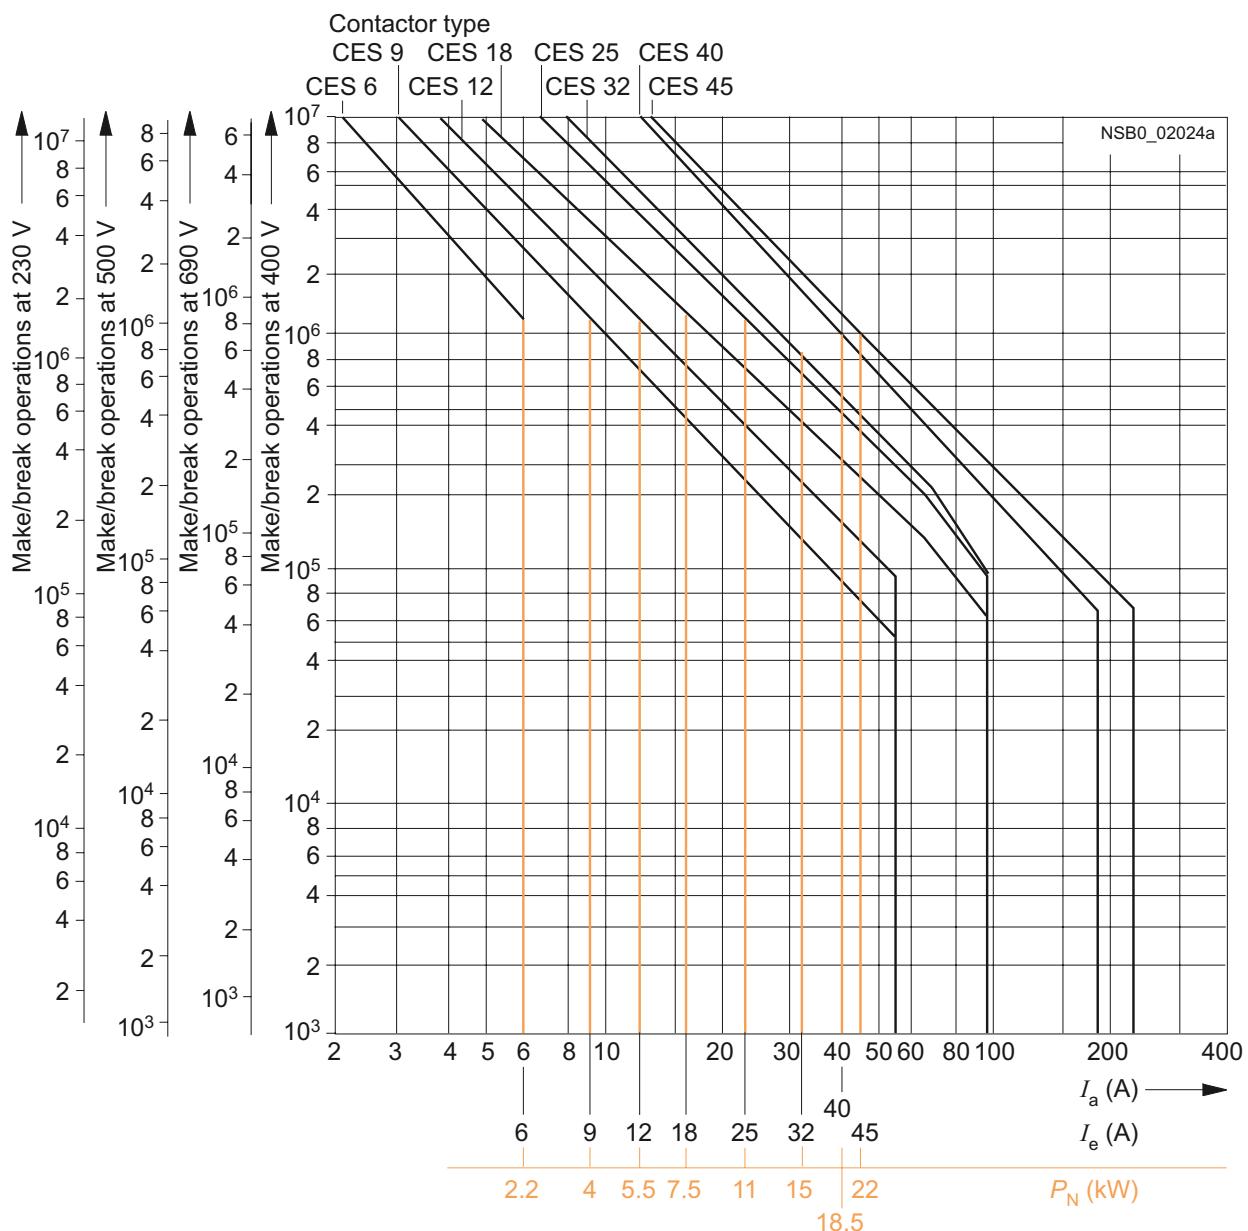

Type of coordination "2": No damage can be tolerated on the overload relay, but contact welding on the contactor is permitted if the contacts can easily be separated.

²⁾ Test conditions according to IEC 60947-4-1.

up to 500 V with endurance and operating frequency		690 V	kW	63	69	90	105	147
		1000 V	kW	45	55	55	75	110

¹⁾ Acc. to IEC 60947-4-1.²⁾ Industrial furnaces and electric heaters with resistance heating for example (higher current during heating-up allowed for).

Dimensional drawings

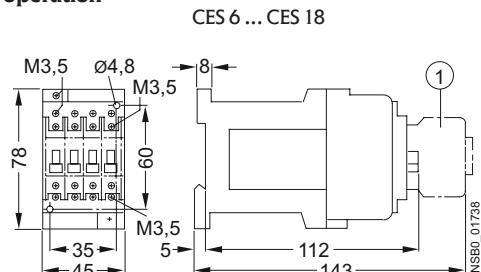

AC operation

① Auxiliary switch block

- 1) Minimum clearance from the earthed parts.
- 2) Dimension for the square OFF-button (stroke 3 mm). Dimension for the round RESET-button (stroke 2.5 mm) less than 2.5 mm.

DC operation

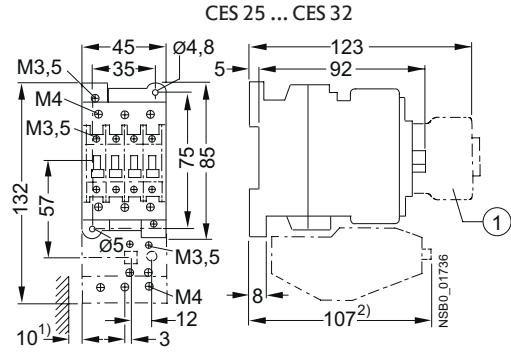

① Auxiliary switch block

• Clearance when mounted in rows:

When CES 6 to CES 32 AC operated contactors are mounted in rows, the minimum gap between them must be 5 mm when the coil voltage $1.1 \times U_s$, the ambient temperature $\geq 45^\circ\text{C}$ and the load factor of all relays is 100 %.

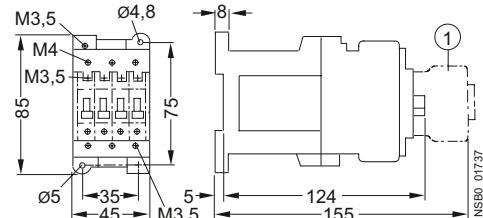

CES 25 ... CES 32

① Auxiliary switch block

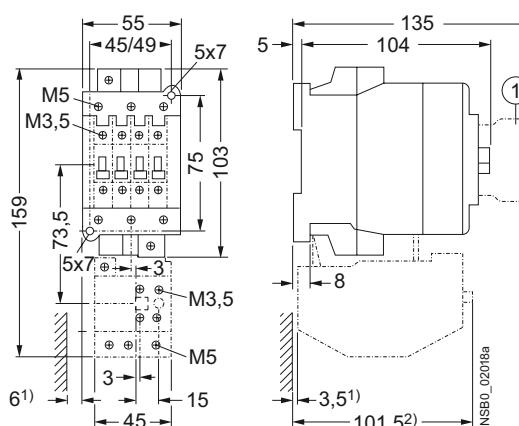

- 1) Minimum clearance from the earthed parts.
- 2) Dimension for the square OFF-button (stroke 3 mm). Dimension for the round RESET-button (stroke 2.5 mm) less than 2.5 mm.

CES 25 ... CES 32

① Auxiliary switch block

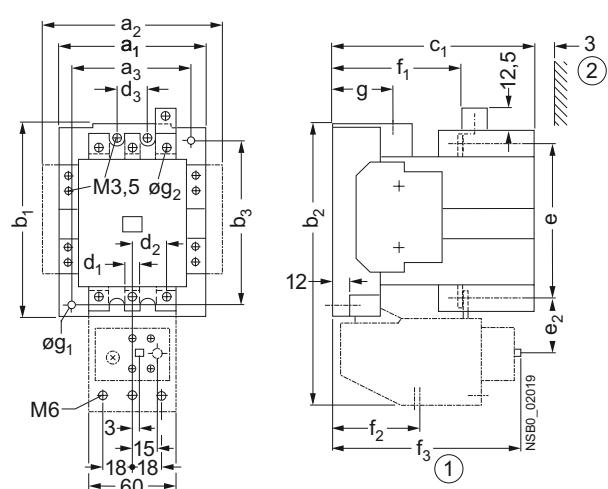

CES 40 ... CES 45

① Auxiliary switch block

- 1) Minimum clearance from the earthed parts.
- 2) Dimension for the square OFF-button (stroke 3 mm). Dimension for the round RESET-button (stroke 2.5 mm) less than 2.5 mm.

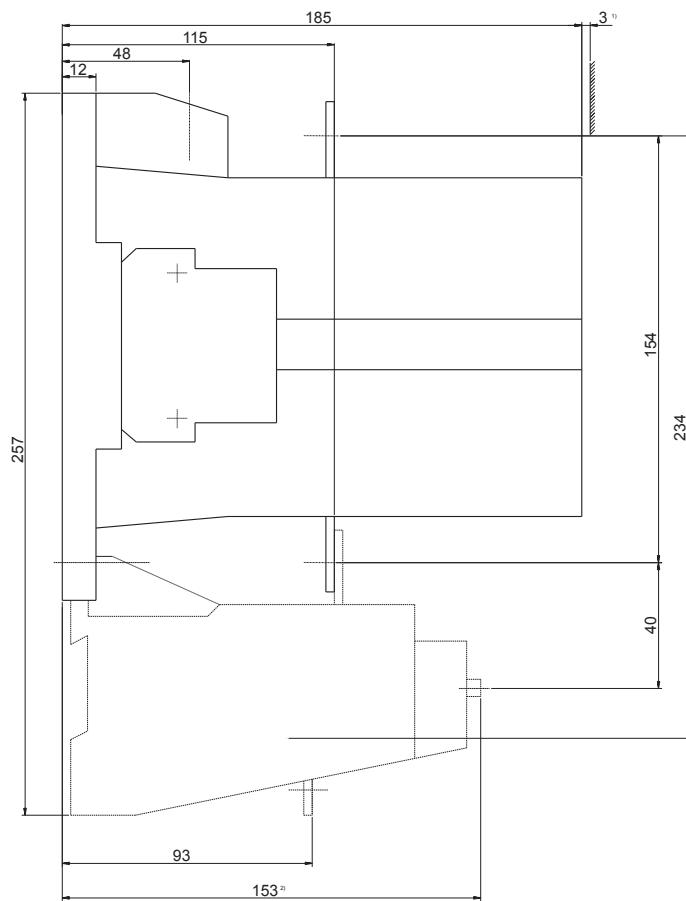

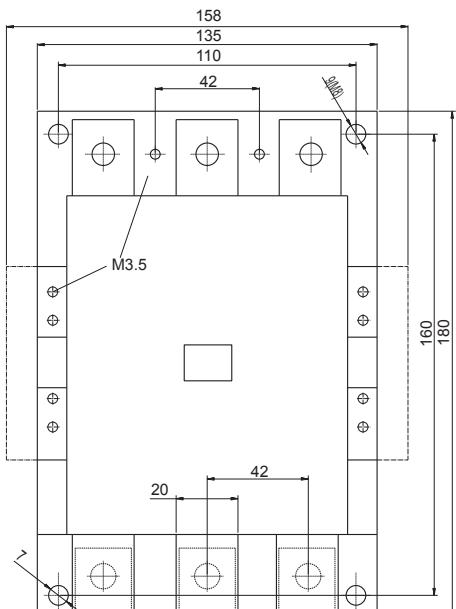

CES 65 ... CES 140

- ① Dimension for the square OFF-button (stroke 3 mm). Dimension for the round RESET-button (stroke 2.5 mm) less than 2.5 mm.
- ② Minimum clearance from insulated components 3 mm. Minimum clearance from earthed components 10 mm

¹⁾ Voltage tolerance +5 %.

²⁾ Coordination of short-circuit equipment according to IEC 60947-4-1:

Type of coordination "1":

The contactor or starter must not endanger persons or the installation in the event of a short-circuit.

They do not need to be suitable for further operation without repair and the renewal of parts.

Type of coordination "2":

The contactor or starter must not endanger persons or the installation and must be suitable for further use.

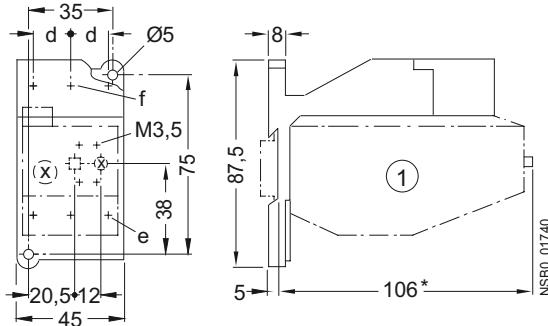

There is a danger of contact welding.

³⁾ D-fuse links $U_N = 500 \text{ V}$
